International application No. PCT/CH 03/00836

Box I	Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
This Inter	national Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
i .	Claims Nos.: 25 and 28 because they relate to subject matter not required to be searched by this Authority, namely:
	Claims 25 and 28 involve a mammalian subject wherein said subject is a human, which is considered by this Authority to be covered by the provisions of Rule $67.1(ii)$ PCT. and Article $34(4)(a)(i)$ PCT.
	Claims Nos.: Decause they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3. D	Claims Nos.: lecause they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II C	Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
This Intern	ational Searching Authority found multiple inventions in this international application, as follows:
S	see additional sheet
1. As	s all required additional search fees were timely paid by the applicant, this International Search Report covers all earchable claims.
2. As	s all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment any additional fee.
3. As	s only some of the required additional search fees were timely paid by the applicant, this International Search Report overs only those claims for which fees were paid, specifically claims Nos.:
	o required additional search fees were timely paid by the applicant. Consequently, this International Search Report is stricted to the invention first mentioned in the claims; it is covered by claims Nos.: laims 1-6, 10-24, 26, 27, 29-31,33-34 (partially)
Remark on	Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.1

Claims Nos.: 25 and 28

Claims 25 and 28 involve a mammalian subject wherein said subject is a human, which is considered by this Authority to be covered by the provisions of Rule 67.1(ii) PCT. and Article 34(4)(a)(i) PCT.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

Invention 1:

Claims 1-6, 10-24, 26, 27, 29-31, 33-34 (partially):
An attenuated bacterial mutant Pseudomonas aeruginosa derived from a pathogenic bacterial strain wherein said attenuated mutant has a mutation of a gene VIR1 and reduced inhibition of Dictyostelium amoeba growth when compared to the growth observed in the presence of an isogenic bacterial strain. A method for identifying an antimicrobial drug comprising contacting a candidate composition with at least one polypeptide or polynucleotide encoded by the gene VIR1. Method for determining the degree of virulence of a pathogen in a subject comprising measuring the level of expression of at least one polypeptide or poly nucleotide encoded by the gene VIR1. A vaccine comprising a pharmaceutically effective dose of one or more of said attenuated bacterial mutants. A bacterial strain comprising an operon encoding a gene VIR1.

Inventions 2 to 19:

Claims 1-6, 10-24, 26, 27, 29-31, 33-34 (partially): An attenuated bacterial mutant Pseudomonas aeruginosa derived from a pathogenic bacterial strain wherein said attenuated mutant has a mutation of a gene VIR2 to VIR19 and reduced inhibition of Dictyostelium amoeba growth when compared to the growth observed in the presence of an isogenic bacterial strain. A method for identifying an antimicrobial drug comprising contacting a candidate composition with at least one polypeptide or polynucleotide encoded by the gene VIR2 to VIR19. Method for determining the degree of virulence of a pathogen in a subject comprising measuring the level of expression of at least one polypeptide or poly nucleotide encoded by the gene VIR2 to VIR19. A vaccine comprising a pharmaceutically effective dose of one or more of said attenuated bacterial mutants. A bacterial strain comprising an operon encoding a gene VIR2 to VIR19.

Inventions 20 to 46: Claims 1-3, 7-24, 26, 27, 29-31, 33-34 (partially):

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

An attenuated bacterial mutant Klebsiella derived from a pathogenic bacterial strain wherein said attenuated mutant has a mutation of a gene VIR20 to VIR46 and reduced inhibition of Dictyostelium amoeba growth when compared to the growth observed in the presence of an isogenic bacterial strain. A method for identiying an antimicrobial drug comprising contacting a candidate composition with at least one polypeptide or polynucleotide encoded by the gene VIR20 to VIR46. Method for determining the degree of virulence of a pathogen in a subject comprising measuring the level of expression of at least one polypeptide or poly nucleotide encoded by the gene VIR20 to VIR46. A vaccine comprising a pharmaceutically effective dose of one or more of said attenuated bacterial mutants. A bacterial strain comprising an operon encoding a gene VIR20 to VIR46.

Invention 47: Claim 32:

An attenuated bacterial mutant derived from a pathogenic bacterial strain wherein said attenuated mutant has a mutation of a gene selected from the group consisting of pchE, pchF, pchG, pchH and pchI and reduced inhibition of Dictyostelium amoeba growth when compared to the growth observed in the presence of an isogenic bacterial strain.
